Avanti AI Labs

Hyperautomation

- "Intelligent automation (IA), or intelligent process automation, is a software term that refers to a combination of artificial intelligence (AI) and robotic process automation (RPA).[1] Companies use intelligent automation to cut costs and streamline tasks by using artificial-intelligence-powered robotic software to mitigate repetitive tasks.[1] As it accumulates data, the system learns in an effort to improve its efficiency.[2] Intelligent automation applications consist of but are not limited to, pattern analysis, data assembly, and classification.[2] The term is similar to hyperautomation, a concept identified by research group Gartner as being one of the top technology trends of 2024"

Avanti AI Labs your Tech Partner

Technology

Intelligent Automation (IA) applies the assembly line concept to modern business processes. Instead of humans performing every step, IA uses smart software bots to handle repetitive tasks—boosting efficiency and accuracy.

Benefits

Streamlined Processes

By automating routine tasks, employees can focus on higher-value work. IA reduces human error, improves proficiency, and enables firms to scale without compromising quality or increasing risk.

Adobe Express
